

Your younger sibling asks you about the shots that they get at the doctor. Explain to them how the shots work to protect you from getting sick.

Your Aunt and Uncle have an 11-year old son and know you have been working on an immunization project in school. They want to know what you have learned about the HPV vaccine. Why is it recommended so young? Should boys also get it?

You are a Pharmacist at a local Pharmacy in the Albuquerque area.

Your manager asks that you put together an educational game about immunizations for a group of middle school students. Come up with an interactive, educational game idea for your manager.

Your parent received the flu vaccine last week. They got the flu two days after receiving the shot. Did the shot cause the illness? If not, what is a good response to educate your parent on what may have happened?

Your parents want to get you and your siblings vaccines at low cost. They spend more money during the holidays and want to save money. Recommend a good resource with details that your parents might be able to use to get the vaccine. Where can they go online to look up information about any questions they may have?

You are 17, and applying to colleges for the upcoming year. You go to your yearly doctor's appointment and they recommend that you receive a few shots based on your age. You are concerned about getting them because someone told you that they contain mercury and can make you really sick. You ask your friend for advice.

WILD CARD 😊

*Come up with a scenario on anything you
learned today about HPV or general
immunizations*
